EVENT – Workshop on ‘Cambridge Learning Solutions – International Education for Global Perspectives.’

DATE – 17.01.2023

VENUE – DPS, Mathura Road, Faridabad

OBJECTIVES - 1) To understand and explore the key elements of Global Perspectives in Primary and Lower Secondary.

2) To know what is needed to teach GP, and look at how a lesson can be constructed.

The workshop on “**Cambridge Learning Solutions – International Education for Global Perspectives**” was held on 17th January, 2023, at DPS Mathura Road, Faridabad. It was conducted by Ms. Achama Mathew, who is the Chief Education Officer for the Bombay Cambridge Gurukul Schools. She is an CAIE trainer and is currently involved in teaching and training for Global Perspectives, and English, Math and Science for Cambridge Primary.

The session emphasized on the key skills of Global Perspectives and how a lesson can be constructed for an active classroom. The resource person highlighted that Global Perspectives adopts an enquiry-based approach and equips students with 6 key skills – Research, Analysis, Communication, Collaboration, Evaluation and Reflection. So, this way it departs from traditional models of education. Developing perspectives at personal, local and international levels is a key component of this subject.

Ms. Mathew also enlightened the attendees about the assessment structure, important resources and documents required for implementing GP, such as Curriculum Framework and the structure of Challenges that are taken up focussing on specific skill set.

Group activities and an interactive QnA towards the end of the workshop helped all the attendees in understanding this programme in depth.

Overall, it was a very informative session about Global Perspectives. Through this course, the learners will grow as critical thinker, a creative investigator and as a powerful communicator!

To summarise, I would say that this course is not about memorizing the content, it is about learning, practicing and improving the skills needed to collect, analyse, and use information in the most important way.

Exploring different perspectives

Evaluating structure of Challenges in GP
